GRID GARDEN

Level 3 of 28

When `grid-column-start` is used alone, the grid item by default will span exactly one column. However, you can extend the item across multiple columns by adding the `grid-column-end` property.

Using `grid-column-end`, water all of your carrots while avoiding the dirt. We don't want to waste any water! Note that the carrots start at the 1st vertical grid line and end at the 4th.

```
1 #garden {
2   display: grid;
3   grid-template-columns: 20% 20%
4   20% 20%;
5   grid-template-rows: 20% 20% 20%
6   20% 20%;
7 }
8
9 #water {
10  grid-column-start: 1;
11  grid-column-end: 4;
12 }
13
14
```

GRID GARDEN

Level 4 of 28

When pairing `grid-column-start` and `grid-column-end`, you might assume that the end value has to be greater than the start value. But this turns out not the case!

Try setting `grid-column-end` to a value less than 5 to water your carrots.

```
1 #garden {
2   display: grid;
3   grid-template-columns: 20% 20%
4   20% 20%;
5   grid-template-rows: 20% 20% 20%
6   20% 20%;
7 }
8
9 #water {
10  grid-column-start: 5;
11  grid-column-end: 2;
12 }
13
14
```

GRID GARDEN

Level 5 of 28

If you want to count grid lines from the right instead of the left, you can give `grid-column-start` and `grid-column-end` negative values. For example, you can set it to `-1` to specify the first grid line from the right. Try setting `grid-column-end` to a negative value.

```
1 #garden {
2   display: grid;
3   grid-template-columns: 20% 20%
4   20% 20%;
5   grid-template-rows: 20% 20% 20%
6   20% 20%;
7 }
8
9 #water {
10  grid-column-start: 1;
11  grid-column-end: -2;
12 }
13
14
```

GRID GARDEN

Level 12 of 28

One of the things that sets CSS grids apart from flexbox is that you can easily position items in two dimensions: columns and rows. `grid-row-start` works much like `grid-column-start` except along the vertical axis. Use `grid-row-start` to water these carrots.

```
1 #garden {
2   display: grid;
3   grid-template-columns: 20% 20%
4   20% 20%;
5   grid-template-rows: 20% 20% 20%
6   20% 20%;
7 }
8
9 #water {
10  grid-row-start: 3;
11 }
12
13
14
```

GRID GARDEN

Level 16 of 28

If typing out both `grid-column` and `grid-row` is too much for you, there's yet another shorthand for that: `grid-area`. accepts four values separated by slashes: `grid-row-start`, `grid-column-start`, `grid-row-end`, followed by `grid-column-end`.

One example of this would be `grid-area: 1 / 1 / 3 / 6`.

```
1 #garden {
2   display: grid;
3   grid-template-columns: 20% 20%
4   20% 20%;
5   grid-template-rows: 20% 20% 20%
6   20% 20%;
7 }
8
9 #water {
10  grid-area: 1/2/4/6;
11 }
12
13
14
```

How about multiple items? You can overlap them without any trouble. Use `grid-area` to define a second area that covers all of the unwatered carrots.

```
1 #garden {
2   display: grid;
3   grid-template-columns: 20% 20%
4   20% 20% 20%;
5   grid-template-rows: 20% 20% 20%
6   20% 20%;
7 }
8
9 #water-1 {
10  grid-area: 1 / 4 / 6 / 5;
11 }
12
13 #water-2 {
14  grid-area: 2/3/5/6;
15 }
16
```

If grid items aren't explicitly placed with `grid-area`, `grid-column`, `grid-row`, etc., they are automatically placed according to their order in the source code. We can override this using the `order` property, which is one of the advantages of grid over table-based layout.

By default, all grid items have an `order` of 0, but this can be set to any positive or negative value, similar to `z-index`.

Right now, the carrots in the second column are being poisoned and the weeds in the last column are being watered. Change the `order` value of the poison to fix this right away!

```
1 #garden {
2   display: grid;
3   grid-template-columns: 20% 20%
4   20% 20% 20%;
5   grid-template-rows: 20% 20% 20%
6   20% 20%;
7 }
8
9 .water {
10  order: 0;
11 }
12
13 #poison {
14  order: 3;
15 }
16
```

GRID GARDEN

Level 21 of 28

Specifying a bunch of columns with identical widths can get tedious. Luckily there's a `repeat()` function to help with that.

For example, we previously defined five 20% columns with the rule `grid-template-columns: 20% 20% 20% 20% 20%`. This can be simplified as `grid-template-columns: repeat(5, 20%)`.

Using `grid-template-columns` with the `repeat()` function, create eight columns each with 12.5% width. This way you won't overwater your garden.

```
1 #garden {
2   display: grid;
3   grid-template-columns: repeat(8, 12.5%);
4   grid-template-rows: 20% 20% 20% 20% 20%;
5 }
6
7 #water {
8   grid-column: 1;
9   grid-row: 1;
10 }
11
12
13
14
```

GRID GARDEN

Level 23 of 28

Grid also introduces a new unit, the fractional `fr`. Each `fr` unit allocates one share of the available space. For example, if two elements are set to `1fr` and `3fr` respectively, the space is divided into 4 equal shares; the first element occupies 1/4 and the second element 3/4 of any leftover space.

Here, weeds make up the left 1/6 of your first row and carrots the remaining 5/6. Create two columns with these widths using `fr` units.

```
1 #garden {
2   display: grid;
3   grid-template-columns: 1fr 5fr;
4   grid-template-rows: 28% 28% 28% 28% 28%;
5 }
6
7
8
9
10
11
12

Places16 Sep 21:57cssgridgarden.com

GRID GARDEN

Level 24 of 28

When columns are set with pixels, percentages, or ems, any other columns set with `fr` will divvy up the space that's left over.

Here the carrots form a 50 pixel column on the left, and the weeds a 50 pixel column on the right. With `grid-template-columns`, create these two columns, and use `fr` to make three more columns that take up the remaining space in between.

```
1 #garden {
2   display: grid;
3   grid-template-columns: 50px 1fr 1fr 50px ;
4   grid-template-rows: 28% 28% 28% 28% 28%;
5 }
6
7 #water {
8   grid-area: 1 / 1 / 6 / 2;
9 }
10
11 #poison {
12   grid-area: 1 / 5 / 6 / 6;
13 }
14
```

GRID GARDEN

Level 26 of 28

`grid-template-rows` works much the same as `grid-template-columns`.

Use `grid-template-rows` to water all but the top 50 pixels of your garden. Note that the water is set to fill only your 5th row, so you'll need to create 5 rows in total.

```
1 #garden {
2   display: grid;
3   grid-template-columns: 20% 20% 20% 20% 20%;
4   grid-template-rows: 50px 0 0 0 1fr;
5 }
6
7 #water {
8   grid-column: 1 / 6;
9   grid-row: 5 / 6;
10 }
11
12
13
14
```
